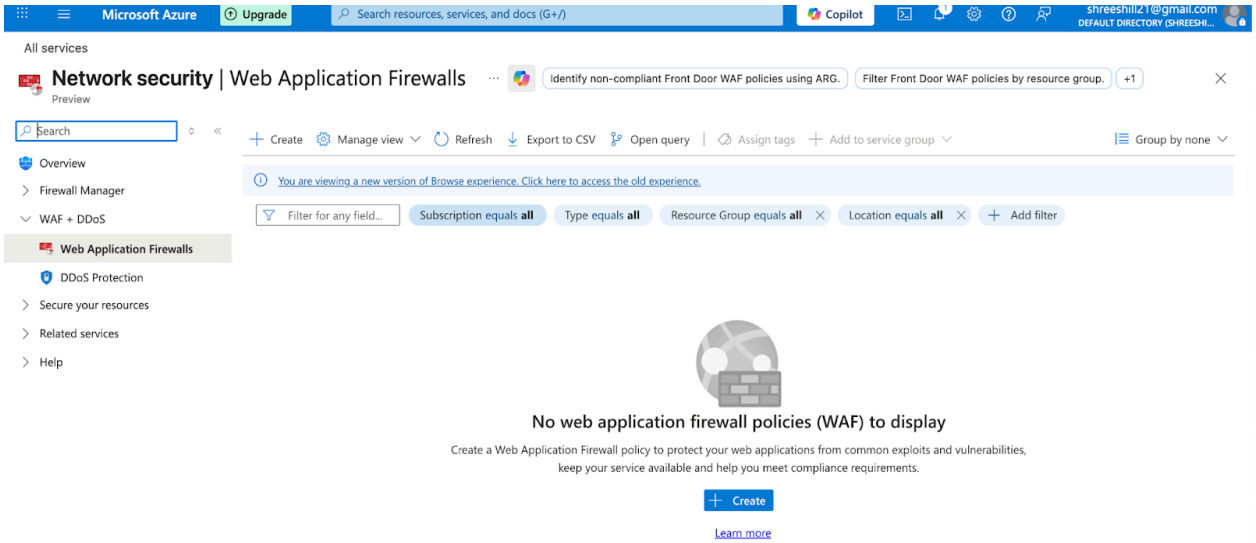
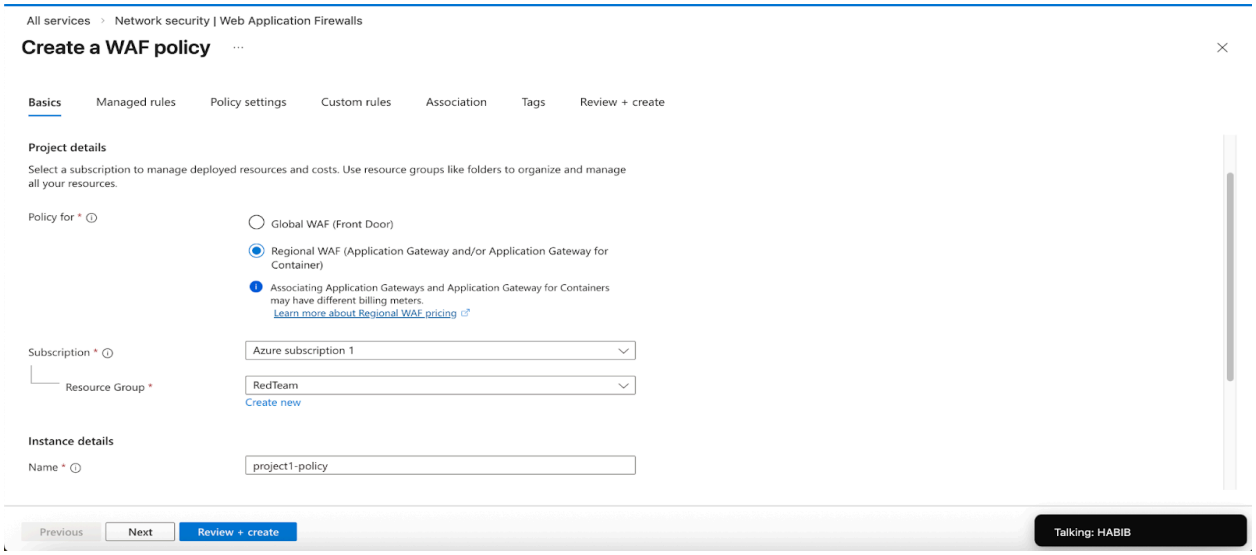
Day3_Activity

Create a Web Application Firewall (WAF)

- Navigate to the WAF service in your cloud platform or security tool.
- Set up a new WAF instance to protect your web application.
- Associate the WAF with your web application.





Microsoft Azure | Upgrade | Search resources, services, and docs (G+/) | Copilot

Policy settings
Configure multiple settings that apply to all rules within the policy.

Managed rules
Configure Azure managed rule sets that protect your web application from common threats.

Associations
Associate this WAF policy to one or more application gateways for protection.

Custom rules
Author custom rules to protect your web application from specifically identified threats.

Log scrubbing rules
Add log scrubbing rules to scrub sensitive data in the logs within this policy.

Add or remove favorites by pressing Cmd+Shift+F

Add Custom Rules

- Identify specific threats or patterns relevant to your application.
- Create custom rules to block or allow traffic based on IP, URL, headers, or request patterns.
- Test the rules to ensure they work without affecting legitimate traffic.
